Copy 2 of 4

22 September 1958

MEMORANDUM FOR: [REDACTED]  
Director of Operations

25X1A

SUBJECT: Storage of Aerial Roll Film

REFERENCE: CHAL 0326, dated 18 September 1958

1. Your referenced memorandum on excessive amounts of residual hypo content of aerial roll film processed by the [REDACTED] Centers is a matter of considerable concern to us at PIC.

25X1A

2. I heartily concur in your plan to have Eastman run residual hypo analyses on all future [REDACTED] processed missions and to append the results to the data accompanying original negatives returned to PIC.

3. We also concur in having a representative cross section of [REDACTED] processed negatives now in storage at PIC being subjected to a residual hypo analysis. I've discussed this subject with [REDACTED] and with your concurrence would leave it to him to work out with [REDACTED] the details for having Eastman preliminarily assist in this analysis with the hope that once indoctrinated we might be able to handle it by ourselves.

25X1A

25X1A

4. I believe that the [REDACTED] Centers should be advised of the conditions described with emphasis on the need for corrective action as soon as possible. This should be accomplished through Jim Reber's office, and by copy of this memorandum I will see that he is fully informed. Your memorandum is very timely as the Air Force is currently seeking to improve [REDACTED] production by setting forth, with our help, the standard specifications for performance to be expected at the [REDACTED] Centers.

25X1A

ARTHUR C. LUNDAHL

Director,

Photographic Intelligence Center
